(54) Title: DEVICE PROVIDING PICTURE VISIBILITY FROM ALL SIDES**(57) Abstract**

The invention refers to a device which provides picture of the object visibility from all sides, whereby the object exposed to view can be in the form of an inscription or picture or three-dimensional object or running inscription or mobile picture or mobile object etc. The picture is the same for all viewers standing around the device and it is presented as a high-frequency and/or true picture. The device further allows for viewing of different pictures depending on the viewer's position around the device. As a matter of fact, the device providing picture visibility from all sides, such as referred to in this invention, is a fast rotating opaque cylinder (1) discontinued lengthwise with a transparent slot (2), whereby the cylinder (1) rotates at high angular velocity around its axle together with the object (3). The transparent slot (2) is positioned in front of the object (3). Depending on the type of the viewed object (3) (two-dimensional object, three-dimensional object), the latter shall be of appropriate design, so that the picture of the object (3) is visible in the normal form.
